

# GARMAB Solar Water Heater

A Local Afghan Product serving Afghans' need for warm water in a sustainable and environmentally sound manner

**A local solution to a local problem. Using god given solar power to heat domestic water.**

**Count on Afghan workmanship to meet the warm water needs of your homes and workplaces.**

Insulating the pipes to protect against freezing in cold weather.

GARMAB literally means “Warm Water”. GARMAB solar water heater has a capacity of 140 to 250 liters of hot water per day at temperatures of 60°C to 75°C, depending on weather conditions.

GARMAB is QRTDW's locally manufactured solar water heater. It is manufactured in Kabul, Afghanistan with locally available material and using local skilled work force. It is based on QRTDW's design and an efficient source of warm water for rural and urban

Afghanistan. The GARMAB solar water heater is used for residential warm water supply as well as in other contexts such as commercial bathing facilities and public buildings

like schools, clinics, offices, mosques, etc. GARMAB is the self sufficient source of your warm water. Use GARMAB and make a difference in your lives.
